https://www.linkedin.com/in/meghna-mullangi/

Objective

Second-year Computer Engineering student at Georgia Institute of Technology with a strong foundation in different programming languages and communication skills. Interested in learning more about the intersection between Computer Hardware and Software along with Chip Design.

Education

Georgia Institute of Technology June 2025- May 2029

- BS in Computer Engineering, GPA: 3.83
- Relevant Coursework: Object-Oriented Programming, Fundamentals of Digital Design, Data Input/Manipulation, Programming for HW/SW Systems

Skills

Programming: Python, Java, SQL, C, Rust, RISC-V, Verilog (novice), Javascript (novice)
Technologies: Jupyter Notebook, Pandas, Numpy, Plotly, BeautifulSoup, API Manipulation, Excel manipulation, Parallel Processing, sklearn, matplotlib, csv, SimVision, JIRA, Accurev, Linux, Git
Hardware: ESP32, uLCD displays, SPI, I2C, RP 2040, breadboard prototyping
Languages: English (fluent), Telugu (basic)

Work Experience

Health Analytics Lab, Researcher – Atlanta, GA Jan 2026 – Present

- Processed and queried a 7+ million-row Medicaid database utilizing Python and SQL to uncover pediatric mental health insights within the foster care system.

Datamaxx, Summer Intern – Tallahassee, FL June 2026 - Aug 2026

- Engineered a dynamic landing page using C# and JavaScript to automate personalized background check distributions for attendees of large-scale sporting and entertainment events.

Activities

Robocup, Member Aug 2026 - Present

- Engineering embedded firmware for an IMU sensor module as part of a collaborative onboarding mini-project, enabling real-time orientation tracking for coordinated robotics.
- Collaborating with the electrical subteam to research, evaluate, and select hardware components for a custom daisy-chained PCB architecture, ensuring seamless multi-board communication.

Projects

ESP32 Embedded LCD Game System – Atlanta, GA Nov 2026 - Present

- Designing and prototyping a standalone interactive display system using an ESP32 microcontroller, uLCD display, and 5-way navigation switch on a breadboard.
- Implementing a custom doubly linked list in C to dynamically manage game entities, rendering states, and collision nodes with optimal memory overhead.

Country Welfare Visualization – Atlanta, GA Dec 2025

- Github link: `https://github.com/cloudradish/Country-Analysis/blob/030bca854b410796e755673298da737804c0e2f3/Phase%20III.ipynb`
- Preprocessed and normalized large-scale datasets (50,000+ rows) from structured and unstructured sources (Excel, JSON, web scraping) to generate comprehensive visual reports.
